PROJECTS

BeatNusa - Automatic Beatmap Generation for Web-Based Rhythm Games

Undergraduate Thesis Project

Developed a web-based rhythm game that automatically generates playable beatmaps from uploaded music using deep learning, while introducing Indonesian traditional songs through interactive gameplay.

- Designed and developed an automated beatmap generation pipeline, integrating audio processing, machine learning predictions, backend services, and interactive gameplay.
- Achieved an F1-score of 0.6840 and lane accuracy of 86.75% in model evaluation, with a System Usability Scale (SUS) score of 77.67Developed a web-based rhythm game that automatically generates playable beatmaps from uploaded music using a deep learning approach, reducing the need for manual beatmap creation.

Style4U - Secondhand E-Commerce Platform

Fullstack Web Development Project

Developed an e-commerce website that facilitates buying and selling secondhand products through an integrated online marketplace.

- Implemented CRUD functionality, state management, and API response mapping to support product data management and frontend-backend communication.

GigsGate - Concert Information Portal

Frontend Web Development Project

Developed a static concert information website inspired by online ticketing platforms, showcasing concerts and music events across Indonesia and internationally.

- Designed and implemented frontend pages, including the About Us section, using conventional web development without frameworks or backend services.

IndoKicks

Mobile Application Development Project

Mobile application providing Indonesian Liga 1 football information, including live scores, match history, seasonal standings, player profiles, and the latest football news.

- Developed the application's frontend interfaces, covering match information, league standings, player details, and football news.
